

About

The person behind the work.

Ahmed Elgharably

ML Engineering Intern - FlyRank

I work at the intersection of search data and human decisions - building ranked, evidence-backed tools that help teams with limited capacity focus on what actually matters.

I believe the best ML work is the kind you can explain out loud, defend with real numbers, and hand to someone who needs it on a Monday morning.

What I believe

Evidence first.

Every claim tied to a number the data can actually prove. No "leveraging cutting-edge AI" without showing the baseline it beat.

No buzzwords.

If I would not say it out loud to someone I respect, it does not go in.

Show the work.

The repo is public. The notebooks run top-to-bottom. The limitations are named honestly.

Decision-support, not magic.

I rank candidates. A human reviewer decides. That is the right division of labor.

Tools & stack

Python

scikit-learn

Pandas

NumPy

DuckDB

Hugging Face

Git

Jupyter

HTML/CSS

Claude

Currently learning

FlyRank ML Track:

Time-series labels, warehouse-scale feature engineering, client-grouped validation, and capstone deployment.

AI Fluency:

Agent architectures, MCP protocol, portfolio building, and framing work that speaks for itself.
