

Ship the Ugly One

Ahmed Elgharably - FlyRank ML Internship - General AI Fluency, Week 5

The Live URL

<https://ahmedelgharably.github.io>

All 5 pages from the sitemap are live and reachable: Home, Projects, Case Study, About, Contact. Navigation works on every page. Every case opens. No placeholder text - real work, real numbers, real links to the repo.

How I Built It

Pure HTML/CSS on GitHub Pages. No frameworks, no build step, no mystery code.

File structure: index.html, projects.html, case-study.html, about.html, contact.html.

CSS: Space Grotesk for headings, Inter for body, identity kit colors (#FAFAF9 background, #0F172A text, #0D9488 main, #F59E0B accent).

Real Person Feedback

Sent to a data analyst at an e-commerce company.

What they saw first: The big "1,847" number on home page.

What confused them: "Lane 2" unexplained on Projects page. [Headshot] placeholder looks broken.

Work landed: "The case study is strong. The table with Precision@50 numbers is the best part. The careful words section makes me trust you more."

Surprise: "I did not expect the contact page to just be an email button. But honestly, an email button is better."

Still Ugly List

1. No real headshot - gray box looks broken
2. "Lane 2" is unexplained jargon
3. No screenshots in case study - all talk, no proof visuals
4. "In Progress" card too vague
5. No mobile menu - nav links wrap awkwardly
6. No dark mode
7. Case study is too long for mobile
8. No analytics

Why I Shipped Now

The core is there: the claim is clear, the case study has real numbers, the navigation works, and the CTA ladders to "send an email." Every item on the "still ugly" list is fixable in a few hours. The hard part - going from zero to live - is done.
