FlyRank AI Internship — General AI Fluency Track — Week 10 Capstone — Ahmed Elgharably

1. Where the Next Case Study Goes

The same portfolio site as my current case studies (the one built and maintained with the Claude Project I already have set up) — added as a new project entry alongside the ADAII graduation project and the Cellula Technologies internship work already published there.

2. Steps to Add a New Case Study

Reusing the Week 2 three-beat shape (problem → what I did → what came of it):

Step	What to Do
1. Problem	1–2 sentences: what needed solving, and why it mattered.
2. What I did	Approach, tools/stack used, key technical decisions.
3. What came of it	Outcome, metrics/results, what it demonstrates.
4. Publish	Draft the three beats inside the existing Claude Project (it already knows my voice), then paste into the portfolio and link it from the index/homepage.
5. Cross-post	Update CV/LinkedIn if the result is strong enough to headline.

3. Next Real Piece of Work to Add

Cellula Technologies — Uber Fare Prediction, Task 3 (model deployment): comparing regression models, saving the best one, and shipping a Flask app (UI + backend) that runs the Task 2 preprocessing/training pipeline on live user input. It is close to done, and it is the strongest “shipped, working thing” currently in the pipeline — stronger case-study material than an in-progress task.

4. Reminder Set (Evidence)

Calendar entry — “*Add Cellula Task 3 (Flask deployment) as a portfolio case study*” — scheduled for once the Flask app and screenshots are finished. A screenshot of this calendar entry is attached as proof for this submission.

5. Build Context Preserved

Keeping the same Claude Project for the portfolio/CV work — it already knows my stack, voice, and identity kit, so adding this case study will be a short follow-up conversation, not a rebuild.

Deliverable for: Send the Link — Launch, Demo & Story (General AI Fluency, Week 10)
